EDUCATION

2025 - 2026	M.S. in Computational Design Practices	Columbia University
2024 - 2025	L.L.B. in Civil Law	Beijing University of Chemical Technology
2020 - 2024	B.A. in Product Design	Beijing University of Chemical Technology

WORK EXPERIENCE

Co-founder Oct. 2025 - Present

WAhA Design Lab

- Led end-to-end UX design for **3+ B2B web products**, owning information architecture, user flows, and high-fidelity prototypes in **Figma**
- Built reusable UI components and design system patterns, delivering handoff-ready specs (**components, states, interactions**) for engineering implementation
- Partnered with senior designers and stakeholders through iterative reviews to align scope, resolve usability issues, and ensure consistent interaction logic across dashboards

Research Assistant Feb. 2024 – Jul. 2024

The Future Laboratory, Tsinghua University

- Created **14 interactive storyboards** and motion prototypes (**MidJourney, Runway, After Effects**) for 3 institutional campaigns, contributing to **100K+ views** and improved project visibility
- Designed an AIGC e-commerce prototype covering key flows (**browse → product → checkout → account**) using established UI kits; ran internal usability testing with **30+ participants** and iterated on navigation, checkout steps, and information hierarchy based on feedback

Product Designer Jan. 2024 – Apr. 2024

TAL Education Group

- Illustrated and digitized 3 children’s picture books using **Figma + Adobe Illustrator**, which were later integrated into TAL’s educational content and reached **50K+ student users**
- Designed end-to-end learning module flows (**entry → task → feedback**) and delivered interactive prototypes; improved engagement by **25%** based on platform analytics
- Ran **10+ feedback sessions** with teachers/parents, synthesized insights into prioritized UX issues, and iterated designs with PM/engineers using clear handoff specs

SELECTED PROJECTS

Meridian Ribbon [Link to Intro](#)

- Engineered a **visual-to-tactile** somatic navigation interface that converts environmental Computer Vision signals into continuous meridian-based haptic feedback
- Wizard-of-Oz prototyping showed continuous “flow” patterns outperform discrete pulses

SKILLS

Frontend Development	JavaScript, HTML/CSS, Flask, Unity, Processing, Arduino
UI/UX & Visual Design	Figma (with AI MCP), Photoshop, Illustrator, After Effects, Onlook
3D & Prototyping	Rhino, KeyShot, 3D Printing, Clay Modeling
